Exclusion of warranty liability for operating manuals

All information in the present documentation was prepared and compiled with great care and reproduced subject to effective control measures. No warranty is provided for freedom from errors. We reserve the right to make technical changes. The present information as well as the corresponding technical data can change without notice. Reproduction of any part of this documentation or its processing or revision using electronic systems is prohibited without the manufacturer's prior written approval.

Components, devices and measured value sensors made by burster praezisionsmesstechnik (hereinafter referred to as "product") are the results of targeted development and meticulous research. As of the date of delivery, burster provides a warranty for the proper condition and functioning of these products covering material and production defects for the period specified in the warranty document accompanying the product. However, burster excludes guarantee or warranty obligations as well as any liability beyond that for consequential damages caused by improper use of the product, in particular the implied warranty of success in the market as well as the suitability of the product for a particular purpose. Furthermore, burster assumes no liability for direct, indirect or incidental damages as well as consequential or other damages arising from the provision and use of the present documentation.

Table of contents

For your safety

The following symbols on the 2511 and in this operation manual warn of hazards.

1.1 Symbols used in the instruction manual

1.1.1 Signal words

The following signal words are used in the operation manual according to the specified hazard classification.

 **DANGER**
High degree of risk: indicates a hazardous situation which, if not avoided, will result in death or serious injury.
 **WARNING**
Moderate degree of risk: indicates a hazardous situation which, if not avoided, may result in death or serious injury.
 **CAUTION**
Low degree of risk: indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.
NOTICE
Property damage to the equipment or the surroundings will result if the hazard is not avoided.

Note: It is important to heed these safety notices in order to ensure you handle the 2511 correctly.

IMPORTANT: Follow the information given in the operation manual.

1.1.2 Pictograms

Symbol	Description
	**Warning concerning the use and installation of the device and software.**
	Observe the advice for protecting the instrument.

1.2 Symbols and precautionary statements on the instrument

Symbol	Description
	**Hazard warning** Disconnect the power plug before opening – Follow safety instructions – Professional servicing only
Warning ! To prevent electrical shock do not open device.	**Warning of electrical shock hazard** Do not open the unit.
To prevent fire replace only with same type and rating of fuse !	**Warning of fire hazard** Always replace the fuse with a fuse of the same type and rating.

1.3 Abbreviations

Abbreviation	Description
BF	Bus error
ESI	EtherCAT Slave Information file

2 Trademarks and Patents

EtherCAT® is a registred trademark and patended technology of Beckhoff Automation GmbH, Germany

Patents:

The EtherCAT Technology is covered, including but not limited to the following patent applications and patents: EP1590927, EP1789857, DE102004044764, DE102007017835 with corresponding applications or registrations in various other countries.

3 Technical data

3.1 Supported EtherCAT-functions

- PDO – Process Data Objects
- SDO – Service Data Objects

You will find further information about EtherCAT at: https://www.ethercat.org/

3.2 Model 2511 device data

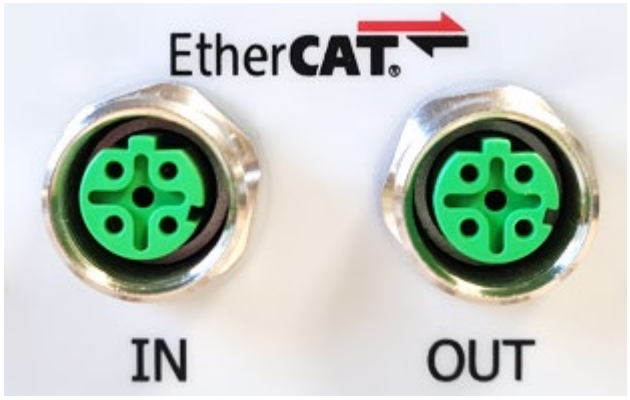
Bus connector	M12
ESI file	burster_2511.xml

4 Installation

Please note that you can download various documents such as installation guidelines and specifications about EtherCAT on https://www.ethercat.org/.

4.1 Port identification

The burster model 2511 EtherCAT can be integrated into the fieldbus network via 2x M12 Industrial Ethernet ports.



4.2 LED functions

4.2.1 Run LED (RUN)

The Run LED reflects the status of the EtherCAT device.

LED State	Indication	Description
Off	INIT	EtherCAT device in 'INIT'-state (or no power)
Green	OPERATIONAL	EtherCAT device in 'OPERATIONAL'-state
Green, blinking	PRE-OPERATIONAL	EtherCAT device in 'PRE-OPERATIONAL'-state
Green, single flash	SAFE-OPERATIONAL	EtherCAT device in 'SAFE-OPERATIONAL'-state
Flickering	BOOT	The EtherCAT device is in 'BOOT' state
Red	(Fatal Event)	If RUN and ERR turn red, this indicates a fatal event, forcing the bus interface to a physically passive state. Contact technical support.

Table 1: Run LED (RN)

4.2.2 Error LED (ER)

The Error LED indicates EtherCAT communication errors etc.

LED State	Indication	Description
Off	No error	No error (or no power)
Red, blinking	Invalid configuration	State change received from master is not possible due to invalid register or object settings.
Red, single flash	Unsolicited state change	Slave device application has changed the EtherCAT state autonomously.
Red, double flash	Sync Manager watchdog timeout	Master doesn't update the Read Process Data within the specified time period
Red	Application controller failure	Fieldbus module in EXCEPTION. If RUN and ERR turn red, this indicates a fatal event, forcing the bus interface to a physically passive state. Contact technical support.
Flickering	Booting error detected	E.g. due to firmware download failure.

Table 2: Error LED (ER)

4.2.3 Link/Activity LED (L/A)

The two Link/Activity LEDs indicate the EtherCAT link status and activity.

LED State	Indication	Description
Off	No Link	Link not sensed (or no power)
Green	Link sensed, no activity	Link sensed, no traffic detected
Green, flickering	Link sensed, activity	Link sensed, traffic detected

Table 3: LINK/Activity LED (L/A)

4.2.4 Meas LED

The Meas LED is a bi-coloured LED that indicates the module's basic status.

LED State	Description
Green, fast blinking	Boot-up
Green, slow blinking (~2 Hz)	Normal operation
Green, flickering	Link sensed, traffic detected
Red, Flash 3 times (repeat)	Fieldbus module error: Module not detected
Red, Flash 4 times (repeat)	Fieldbus module error: Module not supported
Red, Flash 5 times (repeat)	Fieldbus module error: Module not answering
Red, Flash 6 times (repeat)	Fieldbus module error: Module shutdown
Red, Flash 7 times (repeat)	Fieldbus module error: Unexpected error
Green, Red, Permanent	Analogue Input overflow

Table 4: Meas LED

4.2.5 OP LED

LED State	Description
Green, ON	Device is ready for a new measurement
Green, OFF	Device is **not** ready for a new measurement

Table 5: OP LED

5 EtherCAT

5.1 General information on ETHERCAT data transfer

The 2511 with EtherCAT uses for the data transfer the EtherCAT technology CoE (CANopen over EtherCAT). There are two types of data – data which are transferred with each cycle (PDO – Process Data Objects) and data which are transferred on demand only (SDO – Service Data Objects). The SDO-Data are addressed via a combination of Index and Instance Number which you will find in the tables below.

The 2511 device is controlled using the data transferred from Master to Slave. This data always consists of eight bytes for the 2511 unit.

The 2511 sends cyclic 88 bytes to Master. This packet contains device status information and newest measurement values for Rac, Rdc and Ucell.

Note: Decimal value 909090 will be sent if no valid value is available

5.2 Data conversion

5.2.1 Description of the data formats in this manual

The terms PLC inputs and PLC outputs refer to the 2511 unit. These terms are reversed when referring to the Master.

The floating-point numbers ("float" / “real”) mentioned are four bytes long (32 bits) and are based on the IEEE-754 standard.

Numbers that are not specifically labeled or are labeled with "d" or "dec" are decimal numbers, i.e. 1234, 1234dec, dec1234, 1234d.

Numbers labeled "0x" or "hex" are hexadecimal numbers, i.e. 0x1234, hex1234, 1234hex, 1234h.

Numbers labeled "b" or "bin" are binary numbers, i.e. b1100, bin1100, 1100b, 1100bin.

5.2.2 Handling problems that arise when reading floating-point numbers

This only concerns cases in which floating-point numbers need to be read from the 2511 unit.

Floating-point numbers (data type REAL), according to IEEE 754, are encoded as four bytes for transfer. This may create problems depending on the type of PLC used.

Cause

In the 2511-EtherCAT, the sign byte is transferred first if using acyclic data transfer and last during cyclic data transmission. Some PLCs expect this byte in the highest of the four addresses not in the lowest address. This inevitably leads to misinterpretation of the numeric value. In this case, the order of the four bytes has to be changed by the PLC as shown in the figure.

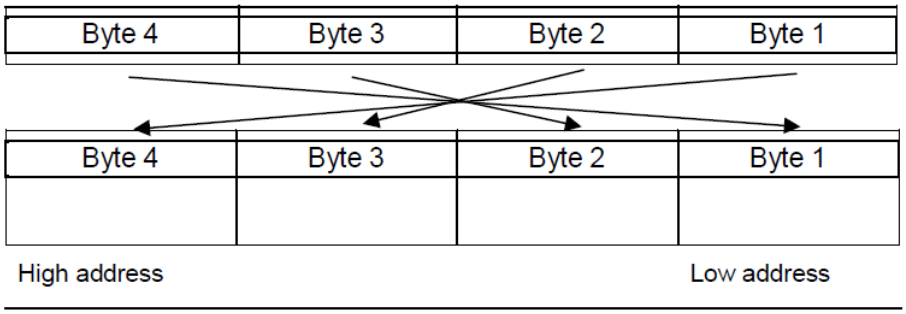


Diagram 1: Exchange of the order of bytes caused by misinterpretation of the numeric value

6 EtherCAT data protocol

6.1 EtherCAT PDO (Process Data Objects) – Transfer from Master to Slave

Eight bytes of PLC-Out data for the 2511 are always transferred from the EtherCAT Master to the 2511.

Please Note: Bits marked as 'reserved' should remain at 0.

6.1.1 EtherCAT PDO bytes overview (Master → Slave)

Address-offset	Length (Bytes)	Description	
0	1	**CONTROL Byte A**	
		xxxx xxx**1**	Bit 0: Start measurement on configured channel (0->1 Edge triggered)
		xxxx xx**1**x	Bit 1: *Reserved*
		xxxx x**1**xx	Bit 2: *Reserved*
		xxxx **1**xxx	Bit 3: *Reserved*

Table 7: PLC input bytes overview

6.2.2 Device Measurement Channel explanation

The 2511 has five measurement channels, each containing 16 bytes of data with following structure:

Address-offset	Length (Bytes)	Description	
0	1	**Live Counter** Incremented with each new measurement (R_{AC}, R_{DC}, U). This counter is used to check if a new measurement has been made and can further reveal if one or multiple measurement values have been missed. The counter overflows from 255 to 0, before counting up again.	
1	1	**Error Code (bit coded)**	
		xxxx xxx**1**	Bit 0: U Range exceeded
		xxxx xx**1**x	Bit 1: Impedance Range exceeded
		xxxx x**1**xx	Bit 2: Contact Error SENSE
		xxxx **1**xxx	Bit 3: Contact Error FORCE
		xxx1 xxxx	Bit 4: Internal Checksum Error
		xx**1**x xxxx	Bit 5: Reserved
		x**1**xx xxxx	Bit 6: Reserved
		1xxx xxxx	Bit 7: Reserved
2	1	**Limit Check Result (bit coded)**	
		xxxx xxx**1**	Bit 0: Measurement Value of R_{AC} under lower limit
		xxxx xx**1**x	Bit 1: Measurement Value of R_{AC} over upper limit
		xxxx x**1**xx	Bit 2: Measurement Value of R_{DC} under lower limit
		xxxx **1**xxx	Bit 3: Measurement Value of R_{DC} over upper limit
		xxx**1** xxxx	Bit 4: Measurement Value of U_{CELL} under lower limit
		xx**1**x xxxx	Bit 5: Measurement Value of U_{CELL} over upper limit
		x**1**xx xxxx	Bit 6: *Reserved*
		1xxx xxxx	Bit 7: *Reserved*
3	1	*Reserved*	
4	4	Newest measurement value: Resistance AC, R_{AC} (real)	
8	4	Newest measurement value: Resistance DC, R_{DC} (real)	
12	4	Newest measurement value: Cell Voltage, U_{CELL} (real)	

Table 8: Device measurement channel explanation

7 EtherCAT SDO – Service Data Objects

Note: The service data objects (SDO) are described from the master's point of view.

Note: Note: The instance number must always be set to 0.

Note: If your perform a write operation it is recommended to read the written value back to be sure that the parameter was correctly set by device

The acyclic EtherCAT services allow access to the following 2511 functions:

- Complete device configuration
- Transfer of order sheet data for logging
- Retrieval of analytical data

For further information and support for Siemens PLC integration, please contact our service department at service@burster.com.

The following abbreviations are used below:

WO	Write Only
RO	Read Only
RW	Read and Write
BOOL	Data type Boolean
REAL	Data type Real, Length = 4 Byte
STR*n*	Data type String, String of *n* Bytes
U8	Data type Unsigned 8, Length = 1 Byte
U16	Data type Unsigned 16, Length = 2 Byte
U32	Data type Unsigned 32, Length = 4 Byte

7.1 Device Info

Index (hex)	Type	Size (Bytes)	Access	Entry
0x23F2	STR20	20	RO	Device Type
0x23F3	STR20	20	RO	Serial Number digital board

0x246F	STR64	64	RW	Part Serial Number 1 Channel 1
0x2470	STR64	64	RW	Part Serial Number 2 Channel 1
0x2471	STR64	64	RW	Part Serial Number 1 Channel 2
0x2472	STR64	64	RW	Part Serial Number 2 Channel 2
0x2473	STR64	64	RW	Part Serial Number 1 Channel 3
0x2474	STR64	64	RW	Part Serial Number 2 Channel 3
0x2475	STR64	64	RW	Part Serial Number 1 Channel 4
0x2476	STR64	64	RW	Part Serial Number 2 Channel 4
0x2477	STR64	64	RW	Part Serial Number 1 Channel 5
0x2478	STR64	64	RW	Part Serial Number 2 Channel 5
0x2479	U8	1	RW	Reserved – Do not use
0x247A	STR64	64	RW	Reserved – Do not use
0x247B	STR64	64	RW	Reserved – Do not use
0x247C	STR64	64	RW	Reserved – Do not use
0x247D	STR64	64	RW	Reserved – Do not use
0x247E	STR64	64	RW	Reserved – Do not use
0x247F	STR64	64	RW	Reserved – Do not use
0x2480	U8	1	WO	Reset Shift Counter • write any byte to reset all counters
0x2481	U32	4	RO	Read combined Measurement Counter of all Channels
0x2482	U32	4	RO	Read Measurement Counter of Channel 1 (counts measurements only of channel 1)
0x2483	U32	4	RO	Read Measurement Counter of Channel 2 (counts measurements only of channel 2)
0x2484	U32	4	RO	Read Measurement Counter of Channel 3 (counts measurements only of channel 3)
0x2485	U32	4	RO	Read Measurement Counter of Channel 4 (counts measurements only of channel 4)
0x2486	U32	4	RO	Read Measurement Counter of Channel 5 (counts measurements only of channel 5)
0x2487	U32	4	RO	Read combined NOK Counter of all Channels
0x2488	U32	4	RO	Read NOK Counter of Channel 1 (counts only NOKs of channel 1)
0x2489	U32	4	RO	Read NOK Counter of Channel 2 (counts only NOKs of channel 2)
0x248A	U32	4	RO	Read NOK Counter of Channel 3 (counts only NOKs of channel 3)
0x248B	U32	4	RO	Read NOK Counter of Channel 4 (counts only NOKs of channel 4)
0x248C	U32	4	RO	Read NOK Counter of Channel 5 (counts only NOKs of channel 5)

Table 15: Order Sheet (Index 130-164)

7.8 Reserved for future use

Index (hex)	Type	Size (Bytes)	Access	Entry
0x24B0	REAL	4	RW	Reserved float number 1
…	….	….	….	….
0x2513	REAL	4	RW	Reserved float number 100
0x2514	U32	4	RW	Reserved integer number 1
…	….	….	….	….
0x2577	U32	4	RW	Reserved integer number 100
0x2579	U16	2	RW	Reserved short number 2 (1 element is already used)
…	….	….	….	….
0x25DB	U16	2	RW	Reserved short number 100
0x25E0	U8	1	RW	Reserved byte number 5 (4 bytes are already used)
…	….	….	….	….
0x263F	U8	1	RW	Reserved byte number 100

Table 16: Reserved for future use (Index 200-324)

7.9 Error Codes

The following error codes are of a EtherCAT Master in response to EtherCAT communication with the 2511.

Error number	Description
0xC0650031 or 0x06020000	**Object does not exist in the object dictionary**
0xC065003A or 0x06090011	**Subindex does not exist (read access)**
0xC0CF8013 or 0x06090011	**Subindex does not exist (write access)**
0xC0CF8006 or 0x06010002	**Object is read-only and cannot be written**
0xC0CF8010 or 0x06070012	**Data type does not match**
0xC0CF8011 or 0x06070012	**Data length is too long**
0xC0CF8012 or 0x06070013	**Data length is too short**
0xC0650028	**Timeout**
0xC065002F or 0x06010001	**Object is write-only and cannot be read**
0x06090030	**Value out of range (only for write access)**
0x08000022	**Invalid present device state**
0x05040005	**Out of memory**
0x06090031	**Value too high**
0x06090032	**Value too low**
0x08000021	**Protected access**
0x08000000	**General error**
0xC0650035	**General internal incompatibility error**
